Service Graph Connector for Qualys

The Service Graph Connector for Qualys pulls in asset inventory data (hardware and software) from the Qualys database into the Configuration Management Database (CMDB) application in your ServiceNow AI Platform® instance.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Supported versions

Use this data to manage your Qualys resources directly from your ServiceNow AI Platform® instance.

Supported Qualys APIs:

- Qualys Global Asset API v2. You might prefer to use this API if you are importing data for the Security Posture Control Security Posture Control application.
- Qualys Asset Management API v2. This API is deactivated by default. You should only activate this API if you don't have access to the Qualys Cybersecurity Asset Management (CSAM) product. ServiceNow uses a different API (Asset management and tagging) for this API but the data returned is not comprehensive.

Supported ServiceNow® versions:

- Utah
- Vancouver
- Washington

Use cases

The following are examples on how you can use the Service Graph Connector for Qualys for different ServiceNow applications:

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

- Complements the Qualys Asset Discovery.
- Import data with the Global Asset API or the Asset Management API.
- Multi-instance support.

Guided Setup

The guided setup for the Service Graph Connector for Qualys provides you with an organized sequence of tasks to configure the integration on your instance.

CMDB integrations dashboard

The Integration Commons for CMDB store app provides a dashboard with a central view of the status, processing results, and processing errors of all installed integrations. You can see metrics for all integration runs. You can filter the view to a specific CMDB integration, a specific time duration, or a specific integration run. For more details about monitoring Qualys integrations in the CMDB Integrations Dashboard, see Using the CMDB Integrations Dashboard.

Hardware CI Rules

The hardware Configuration item (CI) mapping rule table is equipped with hardware category1, hardware category2 and corresponding target CI class. Following a Qualys API call, the system checks the hardware category1 and hardware category2 to determine their satisfaction, if hardware category1 and hardware category2 is match with the table record then the associated target CI class is added to the import set table data. During the mapping process, this designated target CI class is then used.

Computer CI Rules

The Computer CI Mapping Rule table is equipped with predefined rules, including criteria such as OS name, OS category, OS category 2, OS Publisher, OS Product name, and the corresponding target CI class. Following a Qualys API call, the system checks these rules to determine their satisfaction. If a rule is met, the associated target CI class is added to the import set table data. During the mapping process, this designated target CI class is then used.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

If you want to update CI attributes, you must create new reconciliation rules to determine which discovery sources can update CI attributes. See 'Reconciliation rules' in the online product documentation and the Identification and Reconciliation Fundamentals article in the ServiceNow Support Knowledge base for more information.

Asset Management CI Rules

The Asset Management CI Mapping Rule table is equipped with predefined rules, including criteria such as Operating System, Is Volume Info Present, Is processor Present, Cloud Provider and the corresponding target CI class. Following a Qualys API call, the system checks these rules to determine their satisfaction. If a rule is met, the associated target CI class is added to the import set table data. During the mapping process, this designated target CI class is then used.

Configure the Service Graph Connector for Qualys

Set up the Qualys environment and scheduled jobs to import in Qualys data into your Configuration Management Database (CMDB).

Before you begin

To use this Service Graph Connector, you need a subscription to a Subscription Unit that is based in the IT Operations Management (ITOM) Visibility application or in the ITOM Discovery application. As defined in the section titled "Managed IT Resource Types" in ServiceNow Subscription Unit Overview for your subscription, for managed IT resources that are created or modified in the CMDB by this Service Graph Connector, but that aren't yet managed by ITOM Visibility or ITOM Discovery, these resources will increase Subscription Unit consumption from that application. Review your current Subscription Unit consumption within ITOM Visibility or ITOM Discovery to ensure available capacity.

Dependencies and requirements:

- The Integration Commons for CMDB store app, which is automatically installed.
- The CMDB CI class models store app, which is automatically installed. See CMDB CI Class Models.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

- The ITOM Discovery License plugin (com.snc.itom.discovery.license). You must activate this plugin.
- ITOM Licensing plugin (com.snc.itom.license). For more information, see Request Discovery.
- The Datastream Action plugin (com.glide.hub.action_type.datastream), which is automatically installed.
- Observability Commons for CMDB (sn_observability), which is only required for event ingestion. This app must be installed prior to installing the connector for Event Management to work. For more information, see Observability Commons for CMDB on the ServiceNow Store.

There are two supported Qualys APIs:

- Qualys Global Asset API v2. You might prefer to use this API if you are importing data for the Security Posture Control application.
- Qualys Asset Management API v2. This API is deactivated by default. You should only activate this API if you don't have access to the Qualys Cybersecurity Asset Management (CSAM) product. ServiceNow® uses a different API (Asset management and tagging) for this API but the data returned is not comprehensive.

For more information, see Service Graph Connector for Qualys APIs.

Role required: admin

Procedure

1. Navigate to **All > Service Graph Connectors > Qualys > Setup**.
2. Select **Continue** on the Home page.
3. Select **Best Experience** and **Continue** on the Experience page. On the Service Graph Connector for Qualys page in the Configure the connection page, three tasks are displayed:
    - Configure the connection
    - Add multiple instances
    - Set up scheduled import jobs

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

4. Select **Start** for the **Configure the Connection** task to expand it.
   The following steps are displayed:
   - Configure Qualys authentication credentials
   - Configure Qualys HTTP Connection
   - Test Connection
5. Select **Configure Qualys authentication credentials**.
   a. In the **Username** and **Password** fields, enter your Qualys user name and password.
   b. Select the **Active** check box to activate the record.
   c. Right-click in the gray header titled Basic Auth Credentials and select **Save**.
   d. Select **Mark as complete** followed by **Continue**.
      The Configure Qualys HTTP Connection page is displayed.
6. Fill in the fields.
   a. Add the Qualys base URL or Host details.

      Domain part of the URL without the 'https'. An example might be `qualysapi.qualys.com`.
   b. (Optional) If the API is accessible through a MID Server, activate the **Use MID Server** check box.
   c. In the advanced MID Server configuration section select the appropriate MID Server from the MID Selection list.
   d. Right-click in the gray header titled HTTP(s) Connection and select **Save**.
   e. Select **Mark as complete** followed by **Continue**.
      The Test Connection page is displayed.
7. Test the connection.
   a. Update the **use_asset_management_and_tagging_api** property in the 'Service Graph Connection Properties' section.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

Option	Description
true	Set the property **use_asset_management_and_tagging_api** flag to `true` if you are using the asset management and tagging API in the configuration.
false	Set the property **use_asset_management_and_tagging_api** to `false` if you are not using the asset management and tagging API in the configuration.

b. In the Related links section select the **Test Connection** link.
   If the connection is successful, the status code field displays 200 or 201 and a message is displayed. If your connection test fails, review the Message and Suggestion fields for how to proceed.

c. Right-click in the gray header titled Service Graph Connections and select **Save**.

d. Select **Mark as complete** followed by **Continue**.
   The Update Data Source Access page is displayed.

8. Update the data source.

   a. Follow the steps listed at the top of the page to switch the application scope with the application picker to open, edit, and save the record.

   b. Select a record from the list to open it.

   c. Select the **Application Access** tab.

   d. Select the check boxes to set the permissions you want.

   e. Right-click in the gray header titled Tables and select **Save**.

   f. Select **Mark as complete** followed by **Continue**.
      The Update Scheduled Data Import page is displayed.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

9. Update the Scheduled Data Import record.
    a. Follow the steps listed at the top of the page to switch the application scope with the application picker as required to open, edit, and save the record.
    b. Select the **Application Access** tab.
    c. Select the check boxes to set the permissions you want.
    d. Right-click in the gray header titled Table and select **Save**.
    e. Select **Mark as complete** followed by **Continue**.
       The Add Another Connection task is displayed.
10. Follow the instructions at the top of the page to add a connection.
    a. Follow the steps listed at the top of the page to switch the application scope with the application picker to open, edit, and save the record.
    b. Select the link.
       The SG-Qualys Connections page is displayed.
    c. Select **Add Connection** and fill out the fields.

Field	Description
Connection name	Unique name for your connection
Connection URL	Connection URL
User name	Qualys account user name
Password	Qualys account password

    d. Select **Create Connection**.
    e. Navigate back to the Add Another Connection page in the Setup Assistant.
    f. Select **Mark as complete** followed by **Continue**.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

The Configure MID Server for new HTTP connection page is displayed.

11. Configure the MID Server
    a. Select a record to open it.
    b. Select the Use MID server check box.
    c. Select the search icon in the MID Server field and choose one from the list.
    d. Right-click in the gray header titled HTTP(s) Connection and select **Save**.
    e. Select **Mark as complete** followed by **Continue**.
       The Test New Connections page is displayed.
12. Test the connection.
    a. Select the record for the connection you want to test.
    b. Scroll to the Related links section and select the **Test Connection** link.
       If the connection is successful, the status code field displays 200 or 201 and a message is displayed. If your connection test fails, review the Message and Suggestion fields for how to proceed.
    c. Right-click in the gray header titled, Service Graph Connections and select **Save**.
    d. Select **Mark as complete** followed by **Continue**.
       The Configure the scheduled jobs page is displayed.
13. Configure the scheduled jobs.
    a. Select a record to open it.
    b. Fill out the scheduled data import from.

Field	Description
Name	Name of the scheduled job.
Application	Read-only application name.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

Data source	Data source record that defines the data to import.
Run	How often you want the job to run. If you want to run a test import prior to scheduling it, you might prefer to select **Once**.
Run as	Option to run the scheduled job with the credentials of the specified user.
Conditional	Specific conditions under which this job is run.
Active	Option to activate the scheduled job. Select this option.
Use connection	Leave this deactivated for the first run. Specifies another connection and credentials for this job.
Concurrent Import	Leave check box activated. Splits data into multiple imports sets. See the field message for more information.
Partition Method	Leave set as `Custom size`.
Partition Size	Leave set as 1,000. Import set size for early scheduling.
Execute pre-import script	Leave check box selected. Specifies a script to run before the import is performed.
Execute post-import script	Leave check box selected. Specifies a script to run after the import is performed.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

c. Right-click in the gray header titled Scheduled Data Import and select **Save**.

d. (Optional) Select **Execute Now**.
If you do not choose to run the job on-demand, the next job runs according to the schedule you set.

e. Select **Mark as complete** followed by **Continue**.
The Home page of the Setup Assistant is displayed.

14. (Optional) Add Multiple Instances

    a. Select Add Multiple Instances to expand it.
    The following steps are displayed:

    - Update Data Source Access
    - Update Scheduled Data Import
    - Add Another Connection
    - Configure MID Server for New HTTP connection
    - Test New Connections

    b. To update the Data Source, follow the steps listed in step 8.

    c. To update the Scheduled Data Import, follow the steps in step 9.

    d. To add another connection, follow the steps listed in step 10.

    e. To configure a MID Server, follow the steps listed in step 11.

    f. To test connections, follow the steps listed in step 12.

15. On the Service Graph Connector for Qualys page for Guided Setup, select **Complete** to finish the configuration.

Service Graph Connector for Qualys APIs

Data from the Qualys data source fields is imported with the Global Asset API and the Asset Management and Tagging API.

Global Asset API

- A Qualys Cybersecurity Asset Management (CSAM) license is required.

©2026 ServiceNow. All rights reserved. Terms of Use Privacy Statement

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company and product names may be trademarks of the respective companies with which they are associated.

- Asset information includes details such as Hardware Category and OS Category.

Asset Management and Tagging API

- A CSAM license is not required
- Asset information does not include details about Hardware Category and OS Category.

Mapped attributes

The following table compares what data is imported by the two APIs. The sections after the table list data imported by the Global asset API that is not supported by the Asset Management and Tagging API.

Global Asset API	Asset Management and Tagging API

CMDB classes targeted in the Service Graph Connector for Qualys

When you complete setting up the connection, you can configure the integration to periodically pull data. The data is saved in tables that extend from the Configuration item [cmdb_ci] table. The Service Graph Connector for Qualys identifies and classifies information about various configuration Items (CIs).

SGC Qualys Asset Cloud Tag

The following attributes in the SGC Qualys Asset Cloud Tag [sn_sec_sgc_qualys_asset_cloud_tag] table are populated by collected data.
