Service Graph Connector Support Tools

You can use the ServiceNow® Service Graph Connector Support Tools application to resolve any issues or perform a general analysis on a Service Graph Connector installed on your instance.

Request apps on the Store

Visit the [ServiceNow Store](#) website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the [ServiceNow Store version history release notes](#).

Key features

The Service Graph Connector Support Tools application includes prebuilt conversations as a response to an issue type and enables resolving Service Graph Connector issues and to perform a general analysis.

The application provides capability to debug and resolve the following types of issues:

Connection issues

Depending on the data source selected, asks to update or set required properties, enables to run the Workflow Studio action corresponding to the connector manually, and provides a link to HTTP logs for verifying the response from the data source.

Data issues

Checks for customizations in Identification and Reconciliation engine (IRE) rules, reconciliation rules, business rules, and mappings. Reviews the field and import causing the issue, reprocesses the import row, and provides the complete transformation information. Also, provides additional troubleshooting steps.

Performance issues

Depending on the data source and import set selected, makes a basic performance check and reviews the history of the Configuration Management Database (CMDB) integration executions.

Mapping issues

Reviews mappings for input and output fields using the IntegrationHub ETL store app.

The chatbot conversation also directs to the knowledge articles landing page in the Now Support knowledge base, if available for a connector.

- [Install Service Graph Connector Support Tools](#)

You can install Service Graph Connector Support Tools if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

- [Resolving Service Graph Connector issues](#)

You can use the Service Graph Connector Support Tools application to initiate a chatbot conversation with a virtual agent and resolve an issue or perform a general analysis on a Service Graph Connector installed on your instance.

Install Service Graph Connector Support Tools

You can install Service Graph Connector Support Tools if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see [Get entitlement for a ServiceNow product or application](#).

Role required: admin

About this task

The following applications or plugins are installed with Service Graph Connector Support Tools:

Integration Commons for CMDB (sn_cmdb_int_util)

Contains the CMDB Integrations Dashboard and a set of Robust Transform Engine (RTE) transforms and script includes.

Glide Virtual Agent Lite (com.glide.cs.chatbot.life)

Provides IT service assistance using several prebuilt IT Service Management (ITSM) conversations.

Procedure

1. Navigate to **All > System Applications > All Available Applications > All**.

2. Find the Service Graph Connector Support Tools application (sn_sgc_support) using the filter criteria and search bar.

You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

Visit the [ServiceNow Store](#) website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the [ServiceNow Store version history release notes](#).

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. Select **Install**.

Resolving Service Graph Connector issues

You can use the Service Graph Connector Support Tools application to initiate a chatbot conversation with a virtual agent and resolve an issue or perform a general analysis on a Service Graph Connector installed on your instance.

If a user with the admin role has installed the Service Graph Connector Support Tools application, you can initiate a chat conversation with a virtual agent to resolve Service Graph Connector issues. The application includes prebuilt conversations as a response to an issue type.

You can use the prebuilt conversations to debug and resolve the following types of issues:

Connection issues

Depending on the data source selected, the virtual agent suggests you to update or set required properties, run the Workflow Studio action corresponding to the connector manually, and verify the response from the data source using HTTP logs.

Data issues

The virtual agent suggests you to check for customizations in Identification and Reconciliation engine (IRE) rules, reconciliation rules, business rules, and mappings. Review the field and import causing the issue, reprocess the import row, and view the complete transformation information. Also, suggests to perform additional troubleshooting steps.

Performance issues

Depending on the data source and import set selected, the virtual agent suggests you to make a basic performance check and review the history of the Configuration Management Database (CMDB) integration executions.

Mapping issues

The virtual agent suggests you to review mappings for input and output fields using the IntegrationHub ETL store app.

Resolve a Service Graph Connector issue

Resolve the Service Graph Connector issues or perform a general analysis using the Troubleshooting module available for Service Graph Connectors.

Before you begin

[Install Service Graph Connector Support Tools](#)

Role required: admin

Procedure

1. Navigate to **All > Service Graph Connectors > Troubleshooting**.
2. In the Now Support window, select **Click here to start a new conversation**.

3. Select **Show me everything**.
4. Select **Service Graph Connector Help**.
5. Select a help option.

Option	Description
Debug a specific Service Graph Connector	Select to resolve an issue with a Service Graph Connector installed on your instance.
General analysis	Select to analyze an import row or a Configuration Management Database (CMDB) integration execution.

6. Based on the selected help option, follow the help instructions to resolve an issue or perform a general analysis.
7. (Optional) Close the conversation by selecting **End the chat**.
